SUMMARY

BE (EXTC) student and systems engineer with hands-on experience building production dashboards and serverless pipelines, plus personal work in full-stack AI, local-first web apps, and embedded systems. Comfortable across the stack – from REST APIs and cloud integrations (AWS) to hardware datapaths and React/Next.js frontends. Expanding into DevOps and CI/CD.

EDUCATION

Bachelor of Engineering – Electronics & Telecommunication (EXTC)

Don Bosco Institute of Technology, Mumbai

Expected 2027

HSC (Science): 60.50% (2022) — SSC: 79.60% (2020)

TECHNICAL SKILLS

Languages	Python, SQL, C/C++
Backend	Flask, REST APIs, WebSockets
Frontend	React.js, Next.js, Tailwind CSS, shadcn UI
Cloud	AWS (S3, Bedrock, Polly, Lambda, DynamoDB), Cloudflare Workers
Embedded & Digital	Arduino, STM32, ESP8266, FPGA (Verilog HDL)
DevOps & Testing	Git, GitHub Actions (CI/CD), JMeter, ZAP, Wireshark
Currently Learning	Docker, Kubernetes, Linux, GCP, OCI, LLMs/NLP, Vector DBs

EXPERIENCE

Tech Intern, Uniproc Energies

Sept 2025 – Apr 2026

- Built a real-time fleet tracking dashboard with live map visualization, multi-status filtering (moving/idle/parked/stopped), and offline-resilient data access via browser **IndexedDB** fallback.
- Engineered a serverless ingestion pipeline (**WebSockets** + **AWS Lambda**) to filter and structure real-time telemetry into downloadable CSV/PDF reports (fleet performance, geofencing, driving behavior, fuel usage).

PROJECTS

Sovereign – Local-First, Zero-Server Knowledge Workspace

Personal Project, v1 — [Live Demo](#)

- Built a fully local-first knowledge workspace with real-time **P2P collaboration** (Yjs CRDTs over WebRTC) and a bidirectional knowledge graph, using **React 19**, TypeScript, and Tiptap v3 – no backend server.
- Implemented on-device AI (**WebGPU**-accelerated local LLM inference + hybrid BM25/vector semantic search) and a fully offline-capable PWA, deployed on **Cloudflare Workers**.

Neta AI – Multilingual Government Scheme & Grievance Platform

AI for Bharat Hackathon (hack2skill × AWS), 2025

- Deployed a live civic platform covering **10+ government schemes** across **WhatsApp and Web**, by building a serverless backend with **AWS Lambda** for webhook/conversation flow and **DynamoDB** for message state management.
- Enabled AI-powered assistance in **8 Indian languages** by integrating **AWS Bedrock** for eligibility checks and grievance classification, **AWS Polly** for voice output, and a **React.js** frontend with i18n and an admin dashboard.

python-scripts – Open-Source Python Utility Monorepo

Personal Project, Active — 300+ scripts

- Building a growing, categorized collection of standalone Python scripts (automation, checkers, tools), architected for long-term scale toward 1000+ scripts.
- Set up an automated **CI/CD pipeline** via **GitHub Actions** enforcing code quality (black, isort, flake8, pylint, mypy, bandit, vulture, pytest) across Linux, Windows, and macOS on Python 3.12–3.14.

Other Projects:

- OmniLog** (in dev) – High-throughput observability platform (50K+ events/sec) with Rust ingestion & AI incident triage.
- WhereToNext** – Tier-ranked travel discovery site with an interactive 3D globe and an AI-enriched Python data pipeline.
- 8-bit ALU on FPGA** – Verilog HDL ALU datapath (FSM, Double Dabble algo) with a Next.js companion app.
- AI Air Quality System** – Random Forest AQI forecasting from live IoT sensor data via a Flask + React.js dashboard.

ACHIEVEMENTS & ACTIVITIES

- AI for Bharat Hackathon** (hack2skill × AWS, 2025) – Deployed Neta AI, a live multilingual civic platform with full AWS cloud integration.
- Smart India Hackathon (SIH) 2024** – Participated; submitted project for national-level screening.
- Winner Nominee, International Space Science Competition (ISSC 2020)** – Nationally recognized space science research project.
- IETE Student Member** (2024–2027); designing open-source AI/DevOps tools (MCP servers, agent tooling).
